# Customer Churn Prediction

Predict whether a telecom customer is likely to churn or stay using Logistic Regression.

## Customer Churn Prediction

### Project Overview

Customer churn means when a customer stops using a company's service. In this project, Machine Learning is used to predict whether a telecom customer is likely to churn or stay.

### Problem Statement

A telecom company loses customers every month. The company wants to identify customers who are likely to leave the service so that the retention team can take suitable actions.

### Machine Learning Algorithm

Logistic Regression

### Project Workflow
