Customer Churn Prediction

Built using Python, Scikit-learn and Streamlit

Customer Churn Prediction

Predict whether a telecom customer is likely to churn or stay using Logistic Regression.

Model Performance

Performance of the Logistic Regression model on test data.

Accuracy	Precision	Recall	F1 Score	ROC-AUC
80.38%	64.76%	57.49%	60.91%	83.57%

Confusion Matrix

	Predicted Stay	Predicted Churn
Actual Stay	916	
Actual Churn	159	

Interpretation

The Logistic Regression model achieved an accuracy of 80.38% on the test dataset.

ROC-AUC score is 83.57%, which shows the model's ability to distinguish between customers who churn and customers who stay.
